

Subway Ceramics Installation & Care Guidelines

Product description: The Subway Ceramics collection of historically-accurate, glazed ceramic tile is fabricated with the dry-press method to produce a flat, precise and tightly set tile installation, the distinguishing characteristics of Victorian-era tilework. Slight variations in color, shade, finish and dimension are inherent in ceramic products. Physical tile dimensions specified for each tile are actual; nominal tile thickness is 3/8".

Applications: The Subway Ceramics collection is suitable for walls, backsplashes, and vanity tops.

Installation: Tile installation techniques should conform to standard industry methods as specified by The Tile Council of North America (www.tileusa.com). When setting tile, use a beating block to flatten the tile surface and even-up the edges of the tile.

Sealing: All crackle glazes should be sealed with a high-quality impregnating sealer. A pre-grout application of an impregnating sealer is recommended on all glaze finishes when using contrasting grout colors. Moisture can cause discoloration of some glazes. To prevent discoloration, the tile grout should be routinely sealed with an impregnating sealer. Refer to the manufacturer warranty, technical & product information for specific details on product installation, useful life, and product applications (including any warnings) before use. Subway Ceramics, LLC does not accept responsibility or liability for installation, sealing or refinishing of any product.

Care & Maintenance: Glazed tile surfaces should be cleaned routinely with an appropriate, non oil-based household or commercial cleaner. Routine cleaners should never contain acids or ammonia. Acids can damage the grout and the glazed surface of the tile, and ammonia can discolor the grout. Never use abrasive materials that are capable of scratching the glazed tile surface. ALWAYS test a small area PRIOR to usage of any installation/tile/cleaning/maintenance product to determine whether the product you are about to apply serves its intended purpose.
